OF THE

## REGISTRAR GENERAL'S ANNUAL REPORT FOR 1882.

### REPORT:—

	PAGE
INCREASE of POPULATION . . . . .	v
MARRIAGES; Marriage-rate; Relation between Marriage Rate and commercial activity; Number of Marriages celebrated according and <i>not</i> according to the Rites of the Established Church; Previous condition of Persons married; Divorce; Ages of Persons married; Signatures in Marriage Registers; Buildings registered for the Solemnisation of Marriages; Certified Places of Worship . . .	vi-x
BIRTHS. Number registered and Birth-rate; Sex; Illegitimate Births and rate . . . . .	x-xii
DEATHS. General death-rate; Age; Mortality at various Ages; Sex; Urban and Rural Mortality; Registered Causes of Death of different classes; Certification of Causes of Death . . . . .	xiii-xxi
PROGRESS of REGISTRATION. Aggregate Number of NAMES on the REGISTERS; NUMBER of SEARCHES in the Registers and of CERTIFICATES granted at the CENTRAL OFFICE . . . . .	xxi
THE ARMY. STRENGTH and MORTALITY of the ARMY at HOME and ABROAD . . . . .	xxi
THE NAVY. STRENGTH and MORTALITY of the NAVY . . . . .	xxii
BIRTHS and DEATHS of BRITISH SUBJECTS at SEA; MARINE REGISTER BOOK; MORTALITY of MERCANTILE MARINE . . . . .	xxii
EUROPEAN STATES. Marriage, Birth, and Death Rates . . . . .	xxiii
METEOROLOGY; Remarks by James Glaisher, Esq., F.R.S. . . . .	xxiv-xxv
PRELIMINARY TABLES . . . . .	xxvii-cviii

### ABSTRACTS:—

MARRIAGES Registered in England in each of the Registration Divisions, Counties, and Districts; distinguishing those according and those <i>not</i> according to the Rites of the Established Church, and the number in each quarter of the year; distinguishing also the previous Civil Condition of Persons married, Minority, and Signature of the Register by marks . . . . .	1-25
AGES of Persons married, distinguishing those of Bachelors, Spinsters, Widowers, Widows . . . . .	26-28
BIRTHS and DEATHS Registered, and Excess of Births over Deaths, in each of the Divisions, Counties, Districts, and Sub-districts; distinguishing the Sexes in Divisions and Counties, and Illegitimate Births throughout . . . . .	22-91

ABSTRACTS—*continued.*

	PAGE
DEATHS of Males and Females in Public Institutions. . . . .	93-114
DEATHS of Males and Females at different AGES Registered in DIVISIONS, COUNTIES, and DISTRICTS . . . . .	115-136
CAUSES of DEATH of Males and Females in England and Wales at different Periods of Life . . . . .	137-145
CAUSES of DEATH of Males and Females in LONDON at different Periods of Life . . . . .	146-153
CAUSES of DEATH of Males and Females in ENGLAND, and in each of the DIVISIONS and COUNTIES . . . . .	154-177
DEATHS from SEVERAL ZYMOTIC and OTHER CAUSES, and INQUEST CASES, in DIVISIONS, COUNTIES, and DISTRICTS . . . . .	178-210
VIOLENT DEATHS from ACCIDENT and NEGLIGENCE, distinguishing SEX and AGE . . . . .	211-217
DEATHS of INTOXICATED PERSONS from ACCIDENT and other CAUSES; MALES and FEMALES . . . . .	214, 217
DEATHS returned as having occurred from SUICIDE, distinguishing SEX, AGE, and METHOD . . . . .	218-219
DEATHS returned as having occurred from MURDER, distinguishing SEX, AGE, and METHOD . . . . .	220-221
DEATHS returned as having occurred from MANSLAUGHTER, distinguishing SEX, AGE, and CHARACTER . . . . .	222-223
INDEXES of DISTRICTS, SUB-DISTRICTS, and of certain TOWNS, referring to Numbers used in the several TABLES of ABSTRACTS . . . . .	224-239
ALPHABETICAL INDEX to REPORT and TABLES . . . . .	241-254

# REPORT

TO

The Right Honourable SIR CHARLES DILKE, Bart., M.P.,  
President of the Local Government Board, &c. &c.

---

*General Register Office, Somerset House,*  
*31st March, 1884.*

(1882.)

SIR,

I HAVE the honour to submit to you the detailed abstracts of the marriages, births, and deaths that were registered in England and Wales during the year 1882, together with a report on the main features of the vital statistics of that year.

*Increase of Population.*—The numbers of births and deaths registered in the year were 889,014 and 516,654 respectively, so that the natural increment of the population, or excess of births over deaths, was 372,360, or 1·43 per cent. of the estimated population in the middle of the immediately preceding year. In 1881 the natural increment had been considerably higher, amounting to no less than 391,707. The falling off in 1882 was not due to any diminution in the number of births, which were 5372 more than in the previous year, but to an increase in the number of deaths, which, although still much below the average of recent years, was considerably in excess of the number registered in 1881, when the death-rate reached the minimum as yet recorded.

Were the growth of the population since the last Census determined simply by the balance between registered births and deaths, the population of England and Wales in the middle of 1882 would have numbered 26,464,820 persons. But such a method of reckoning leaves out of account the effects of emigration and of immigration, which cannot be measured with any great precision. It would appear, however, from the returns made by the Board of Trade that the loss due to the excess of emigration over immigration since the date of the Census must have been considerable. For both in 1881 and in 1882 the excess of emigrants from the United Kingdom over immigrants into it was of unprecedented magnitude. The excess in 1881, according to the Board of Trade returns, amounted to 315,409, and in 1882 to 335,020 persons, whereas the average annual excess in the five preceding years has been only 115,934. How much of these losses fell respectively to England and Wales, to Scotland, and to Ireland, we have no means of stating with any precision; but that pretty nearly a full share in the increased losses in 1881 and 1882 fell to the population of England and Wales may be inferred with much probability from the fact that of those emigrants who were natives of the United Kingdom 58 per cent. in each of the two years were of English or Welsh origin, the mean proportion in the five preceding years having been 60 per cent., or only slightly higher.

The population, as enumerated in April 1881, numbered 25,974,439 persons; and, on the hypothesis that the rate of increase continued to be the same as it had been in the interval between that date and the previous Census, the population in the middle of 1882 was 26,413,861. Of these 12,853,737 were males and 13,560,124 were females. This is the population on which the rates in this report have been calculated.

## MARRIAGES.

The marriages in 1882 numbered 204,405, giving a rate of 15·5 persons married to 1000 persons living. The marriage-rate was at its maximum in 1873, and fell year after year continuously from that date till 1879, when it was at its minimum, viz. 14·4. In 1880 it began to recover from the long depression, and was 14·9; in 1881, it advanced to 15·1, and finally in 1882, a still further rise brought it, as already stated, to 15·5.

Coincidentally with the rise in the marriage-rate, there was in 1882, as almost invariably is the case, an increase in the value of exports from the United Kingdom per head of the total population: there was also, as is not quite so invariably though still most commonly the case, a rise in the value of imports per head of population; and finally there was what, as was shown in my last Annual Report, is not usually a concomitant of a rise in the marriage-rate, a very slight fall in the average Gazette price of British wheat. The fluctuations in these several measures of well-being are shown in the following table. A column has also been added to the Table, giving the fluctuations in another measure of commercial activity, viz., the amount cleared each year at the London Bankers' Clearing House, per head of population. It will be seen that here also there is a very close agreement with the fluctuations in the marriage-rate; in each case the maximum was reached in 1873, and the minimum since that date in 1879.

TABLE A.—MARRIAGE-RATE, BRITISH EXPORTS AND IMPORTS, PRICE OF WHEAT, and amount cleared at the Bankers' Clearing House, in each of the 23 Years 1860–82.\*

YEARS.	Marriage-rate.	Value per Head of Population.			Average Price of Wheat per Quarter.	Amount cleared at the Bankers' Clearing House per Head of Population.

1882	15·5	6 16 10	11 14 0	20 7 8	45 0	236

\* The figures in the marriage-rate column are not strictly comparable with those in the value columns, inasmuch as the former relate only to England and Wales, while the latter relate to the whole of the United Kingdom. The figures in the value columns are derived from the Board of Trade Statistical Abstracts, but have been slightly altered in accordance with later and more accurate estimates of the population. The figures showing the amount cleared at the London Bankers' Clearing House are also derived from the Board of Trade Statistical Abstracts, calculated upon the population of England and Wales.

If the marriage-rates of 1882 are compared with those of 1879, the year of greatest depression, (*see* Table 9), it will be seen that the only counties that apparently did not share in the recovery were Kent (extra-metropolitan), Sussex, Hampshire, Berkshire, Hertfordshire, Oxfordshire, Huntingdonshire, Cambridgeshire, Dorsetshire, Gloucestershire, Herefordshire, and Rutlandshire, together with North Wales, all of which are mainly agricultural. In each of these counties the rate in 1882 was lower, or at any rate not higher, than it had been in 1879. On the other hand the counties which showed the greatest recovery were Durham, Monmouthshire, Staffordshire, Cumberland, Cornwall, the North Riding of Yorkshire, and Nottinghamshire, all of which are mainly of mining or industrial character.

*Forms of Marriage.*—Of the 204,405 marriages celebrated in 1882, 146,102 or 71·5 per cent. were solemnised according to the rites of the Established Church, and 58,303 or 28·5 per cent. otherwise. The proportions were precisely the same in the immediately preceding year 1881; a fact which is worthy of notice, inasmuch as there had been no similar arrest since 1871 in the almost continuous decline in the proportion of church marriages to marriages of all kinds. The subjoined Table shows what proportion of the marriages in the Established Church were by license, banns, and Superintendent Registrar's Certificate respectively; and it will be noticed that the proportion of marriages by banns, which began to rise in the quinquennium ending with 1865, rose in 1882 to the highest point attained since that period.

TABLE B. — OF the MARRIAGES CELEBRATED in the ESTABLISHED CHURCH, the PROPORTION PER CENT. by SPECIAL LICENSE, LICENSE, BANNS, and by SUPERINTENDENT REGISTRAR'S CERTIFICATE, 1841-82.

PERIODS OF FIVE YEARS.	PROPORTIONAL NUMBERS of MARRIAGES according to the RITES OF THE ESTABLISHED CHURCH.*				
	Total.	Special License.	License.	Banns.	Superinten- dent Registrar's Certificate.
1841-45 - -	100	·01	15·42	83·28	1·29
1846-50 - -	100	·01	15·47	82·39	2·13

Year 1881 - -	100	·04	9·61	87·76	2·59
„ 1882 - -	100	·05	9·12	88·42	2·41

\* The Church marriages not otherwise described have been proportionally distributed over the headings "Special License," "License," &c.

In 469 of the marriages in 1882 the particulars required for the accurate construction of the above Table were not furnished, owing to the negligence of the officiating clergymen. These cases of neglect were, however, fewer in number than in any previous year.

Of the 58,303 marriages, not according to the rites of the Establishment, 9,235 were solemnised in Roman Catholic places of worship; 70 were

marriages according to Quaker Rites; 22,768 were solemnised in the chapels of other Christian communities; 513 were marriages of Jews; and 25,717 were civil marriages in the offices of Superintendent Registrars.

*First Marriages; Re-marriages. Males.*—Of the 204,405 men who married in 1882, 178,849, or 87·5 per cent. were bachelors,\* while 25,556, or 12·5 per cent., were widowers.

Of the 178,849 bachelors, 170,720, or 95·5 per cent., married spinsters, while 8129, or 4·5 per cent., married widows.

Of the 25,556 widowers who re-married, 15,616, or 61·1 per cent., married spinsters, while 9940, or 38·9 per cent., married widows.

*Females.*—Of the 204,405 women who married, 186,336, or 91·2 per cent., were spinsters,\* while 18,069, or 8·8 per cent., were widows.

Of the 186,336 spinsters, 170,720, or 91·6 per cent., married bachelors, while 15,616, or 8·4 per cent., married widowers.

Of the 18,069 widows who re-married, 8129, or 45·0 per cent., married bachelors, while 9940, or 55·0 per cent., married widowers.

*Divorce.*—The number of persons married in the year, who were described as divorced, was 124, and consisted of 69 men and 55 women. Of the 69 men, 53 married spinsters, 14 married widows and 2 married divorced women; while of the 55 women, 41 married bachelors, 12 married widowers, and 2 married divorced men.

*Ages at Marriage.*—In 30,236, or 14·8 per cent., of the marriages, the officiating minister or registrar neglected to insert the ages of both parties, or of one or the other of them, in the register. The mean age at marriage of the remaining 174,169 couples, whose ages were duly stated, was 27·9 for the males and 25·6 for the females. The mean age of the bachelors was 25·9 and of the spinsters was 24·4 years; while the mean ages of the widowers and widows who re-married were respectively 43·3 and 39·8 years. How very slightly the mean ages vary in successive years is seen in the following Table.

TABLE C.—MEAN AGES AT MARRIAGE.

YEAR.	Bachelors.	Widowers.	Bachelors and Widowers.	Spinsters.	Widows.	Spinsters and Widows.
1867	25·8	—	28·0	24·5	—	25·8
1868	25·8	—	27·9	24·4	—	25·7
1869	25·8	—	28·0	24·4	—	25·7
1870	25·8	42·6	27·9	24·4	38·8	25·7
1871	25·8	42·6	27·9	24·4	39·0	25·7
1872	25·7	—	27·9	24·3	—	25·7
1873	25·6	—	27·8	24·2	—	25·6
1874	25·7	43·0	27·9	24·3	39·4	25·7
1875	25·7	43·0	27·9	24·3	39·4	25·8
1876	25·7	43·1	28·0	24·4	39·5	25·8
1877	25·7	43·0	27·9	24·4	39·6	25·8
1878	25·8	43·1	27·9	24·4	39·6	25·8
1879	25·8	43·2	27·9	24·3	39·8	25·6
1880	25·8	43·3	27·9	24·4	39·6	25·7
1881	25·9	43·4	28·0	24·4	39·8	25·7
1882	25·9	43·3	27·9	24·4	39·8	25·6

\* The 69 divorced men who re-married in the year are here reckoned as bachelors and the 55 divorced women who re-married are reckoned as spinsters.

Of the women who marry rather more than half, and of the men who marry rather less than one-half, are from 20 to 25 years of age (See Tables on p. 26). The annual chances of marriage are, as might be supposed, much higher for women than for men in the earlier periods of life, and much higher for men than for women in the later periods. This is shown in the following Table, which gives the number of bachelors and spinsters who married annually out of 1000 living of corresponding ages. The figures are given both for 1870-71-72, and for 1880-81-82; and it will be seen that at both periods the annual chances of marriage are considerably higher for women up to the age of 25, but that after that age the chances are higher for men. It will also be noted that the decline in the marriage-rate in 1880-81-82 as compared with 1870-71-72 affected both bachelors and spinsters, and at each stage of life without exception.

TABLE D.—ANNUAL MARRIAGES of BACHELORS and of SPINSTERS per 1000 living at successive age-periods.

Age Periods.	1870-71-72.		1880-81-82.	
	Bachelors.	Spinsters.	Bachelors.	Spinsters.
15	4·7	22·5	4·6	21·8
20	123·5	137·9	106·8	121·7
25	120·4	88·6	112·4	80·4
35	43·6	31·3	40·5	26·3
45	15·5	12·3	14·3	10·4
55	3·3	3·7	3·0	1·6

*Marriages of Minors.*—The numbers of men and women under 21 years of age who married in 1882 were 15,459 and 45,019 respectively; so that of every 100 men who married 7·56, and of every 100 woman who married 22·02 were minors. The proportion of these premature marriages to all marriages was at its maximum in 1874, both for males and females; from that date the proportion declined continuously year by year till 1881 inclusively, but in 1882 the continuity of the decline was broken and the proportion rose in both sexes. This change would seem to indicate that the increase that occurred in the marriage-rate was greater among the improvident, than in the provident classes.

*Signature in Marriage Register.*—The proportion of persons who at the time of marriage were unable to sign their names in the register was 15·2 per cent. in 1882, and was smaller than in any previous year. It is, however, to be noted that the progress in this respect has not been so rapid in the last few years as in the immediately preceding periods. In the triennial period, 1874-76, the decline in the proportion of illiterates who married, compared with the preceding three years was 11·2 per cent.; in the succeeding triennium, 1877-79 the decline was 14·9 per cent.,

whereas in the next period, 1880-82, the fall was only 8·5 per cent., and on one occasion during that period, viz., in 1880, there was, as was pointed out in the report for that year, an actual retrogression, for the first time since 1850, and the proportion of illiterates slightly increased. The probable explanation of this apparent retardation in the efforts of education, is, as has been pointed out in previous reports, that in periods of industrial depression, such as the country has been passing through in recent years, the educated and the prudent classes abstain from marriage to a greater extent than do the improvident and the uneducated. At the same time, however, it must be borne in mind that there must eventually come a time when state education will have done all of which it is practically capable; and that, as this time approaches, there must necessarily be a falling off in the rate of progress.

*Certified Places of Worship.*—There were on 31st December 1882 22,070 places of worship (not belonging to the Established Church), certified under Acts 15 and 16 Vict. c. 36., and 18 and 19 Vict. c. 81. There were 769 new buildings registered during the year, whereas 65 buildings were removed from the register by cancellation; the net increase during the year was therefore 704.

*Buildings registered for the Solemnisation of Marriages.*—The number of buildings registered for the solemnisation of marriages by other rites than those of the Established Church, standing on the register at the end of 1882, was 9005 (see Table 11), showing an increase of 178 during the year.

## BIRTHS.

The births registered in 1882 numbered 889,014, and were in the proportion of 33·7 births per 1000 persons living. This was the lowest birth-rate recorded since 1853, when the rate was only 33·3. The rate was at its maximum point in 1876, when it was 36·4; but from that date fell uninterruptedly, in natural accordance with the fall in the marriage-rate.

The lowest birth-rates were in Huntingdonshire (27·6), Herefordshire (27·7), Rutlandshire (28·0), Cambridgeshire (28·5), Dorsetshire (29·1), North Wales (29·2), and Shropshire (29·3); while the highest were in Leicestershire (34·9), Monmouthshire (34·9), Essex (35·0), North Riding (35·1), Lancashire (36·0), Nottinghamshire (36·9), Staffordshire (37·6), and Durham (39·3). These differences, as has been pointed out in previous reports, are explicable in part by the greater proportion of married women of reproductive ages in the population of mining and manufacturing, as compared with agricultural districts, and in part by the comparative youthfulness of such excess of married women; but it would also appear that, when all allowance has been made for such differences, there is still an excess of fertility in the industrial as compared with the agricultural parts, which may possibly find its explanation in the greater physical vigour of the mining and industrial population, which is constantly being recruited by the immigration of the pick of the rural population.

*Sex.*—The male births numbered 452,752, and female births numbered 436,262, so that the former were to the latter in the proportion of 103·8 to 100; the mean proportion in the ten preceding years having been 103·9 to 100. (*See* Tables 13 and 16.)

*Illegitimate births.*—The illegitimate births numbered 43,155, and were in the proportion of 4·9 to every 100 births registered. The proportion had been precisely the same in 1881, but was higher than in any one of the six preceding years. This was not due to any increase in the illegitimate births, but to the diminution in the legitimate births caused by the large decline in the marriage-rate. The illegitimate births were in fact fewer in proportion to the population than in any previous year, being 1·6 to 1000 persons living, a proportion fractionally below that of the seven immediately preceding years, in each of which it was 1·7. (Table 13.)

The amount of illegitimacy, as measured by the proportion of illegitimate births to unmarried females of childbearing ages, differs very greatly in different counties. This question was discussed at some length in the Annual Report for 1879, and it was then pointed out that England and Wales could be divided, and not very roughly, into three zones, a southern zone with an illegitimate rate below the general average, a midland zone with illegitimacy somewhat above the average, and a northern zone with an excessively high illegitimate rate. The experience of the three years that have elapsed since that report confirms the conclusions then arrived at, as will be seen by comparing the first column of figures in the following table with the corresponding county figures in the report for 1879 (42nd Annual Report, page xvii.). The order of the counties in the two tables is almost identical.

A very considerable proportion of the illegitimate births, namely 163 per 1000, occur in workhouses; whereas the proportion of legitimate births that occur in those institutions is no more than 2·1 per 1000. The extent, however, to which the workhouse is resorted to by unmarried women for their confinements varies very much in different counties, and it is curious to note that, as is shown in the second column of figures in the following table, the proportion of illegitimate births that occur in workhouses is on the whole, and speaking generally, highest in those counties in which the illegitimate birth-rate is lowest; and, vice versâ, is lowest where illegitimacy is most common. It may be suggested as a not improbable explanation of this inverse relation between the figures in the two columns one and two of the table, that the counties in which there is most illegitimacy are counties where there is much systematic domestic concubinage, in which the mother of the illegitimate children enjoys the state of mistress of the house, and remains there for her confinements; whereas the counties in which there is comparatively little illegitimacy are counties in which systematic concubinage is not common, such illegitimate births as occur being rather the results of stray licentiousness; in which case the mother has no house of which she is mistress, and is consequently forced in her need to take refuge in the workhouse.

TABLE E.—ANNUAL RATE of ILLEGITIMATE BIRTHS per 1000 UNMARRIED WOMEN, aged 15-45 years, in the three years 1880-81-82; and the PROPORTION per 1000 of ILLEGITIMATE BIRTHS registered in WORKHOUSES in 1882.

## DEATHS.

The deaths registered in 1882 numbered 516,654, and were in the proportion of 19·6 to 1000 persons living. In 1881 the proportion was 18·9, but with this single exception the death-rate in 1882 was the lowest as yet recorded. The annual death-rate in the decade 1871-80 was 21·39, and had the rate in 1882 remained at the same point there would have been 48,338 additional deaths in the course of the year. Some part, it is true, of this diminished mortality must be ascribed to the change in the age-distribution of the population, the proportion of aged persons, among whom the death-rate is always high, having diminished of late years. For this change, however, it is easy to make allowance, by calculating the number of deaths that would have occurred, had the conditions of health remained as in the previous decade, from the death-rates at each successive age-period, and not from the general death-rate. The general death-rate, then, in England and Wales, with the altered age-distribution, would have been 21·18, had the death ratio at each successive age-period remained as in 1871-80, and the total deaths would have been 559,532 instead of 516,654. Thus of the apparent saving of 48,338 lives only 42,878 lives were really saved, while the remaining decrease of 5460 deaths was only apparent, being in reality due to the altered age-distribution of the population.

*Ages.*—The fluctuations in the general death-rate, that is to say, in the proportion between deaths and population of all ages, affords a convenient measure of the varying health of a given community; but in any comparison between one community and another, or between one community and itself at any considerable interval of time, it is necessary to correct the general death-rate for differences in the sex and age distribution of the population; for it is self-evident that with equal degrees of healthiness a population that contains a larger proportion of very young children or of very aged persons will have a higher death-rate than a population in which the proportion of such persons is lower; and the same, though in a smaller degree, will be the case when the population contains an abnormal proportion of males, inasmuch as the male death-rate is always higher than the female death-rate.

As regards England and Wales, taken as a whole, tables are added to these Annual Reports (Tables 24, 25), which give the death-rate for each sex at each of twelve successive age-periods in each year since civil registration began; and it is to the fluctuations shown in these tables, rather than to the fluctuations in the general death-rate, that most importance should be attached by those who desire great accuracy. Limitations of time and space render it impossible to give similar tables for the subdivisions of the country. There is, however, a table (Table 26) which gives the death-rates in each county at each age-period for persons, without distinction of sex; and as the differences of sex-distribution between one county and another, or between one county and itself in different years, are not sufficiently great to cause more than a scarcely appreciable difference in their general death-rates, that table will be found sufficient for all practical purposes of comparison.

Disregarding, then, the insignificant differences due to any change that may have occurred in sex-distribution, and limiting ourselves to persons, we have in the following summary table the annual death-rates at each age-period in 1882, 1881, and the preceding quinquennium; and it will be noted that in the two years 1881 and 1882 not only did the general death-rate fall considerably below the previous record, but that the fall was shared in by each age-period; so that the conditions that prevailed in each of those two years must have been favourable in all stages of life. This is

a matter of considerable interest, inasmuch as there had previously been as was pointed out in the report for 1879, a tendency to increase in the death-rate at the later age-periods, the falling off in mortality being exclusively confined to the earlier part of life.

TABLE F.—ANNUAL DEATH-RATES at successive age-periods, per 1000 persons living at each period.

YEAR.	All ages.	0—	5—	10—	15—	20—	25—	35—	45—	55—	65—	75—	85—
1876	20·9	62·6	6·1	3·6	5·3	7·0	8·8	12·8	17·6	31·0	62·6	136·7	294·1
1877	20·3	58·8	5·8	3·6	5·0	6·7	8·6	12·5	17·3	31·0	63·0	135·9	300·9
1878	21·6	66·2	6·4	3·6	5·0	6·5	8·4	12·4	17·4	32·0	65·0	145·6	320·7
1879	20·7	58·1	6·1	3·4	4·8	6·2	8·3	12·3	17·8	33·6	69·5	156·4	330·5
1880	20·6	64·5	6·3	3·3	4·7	6·0	7·7	11·6	16·5	30·5	62·3	134·5	275·5
Mean 5 years 1876-80	20·8	62·0	6·1	3·5	5·0	6·5	8·4	12·3	17·3	31·6	64·5	141·8	304·3
1881	18·9	52·1	5·7	3·2	4·6	6·0	8·1	11·9	17·0	30·8	62·7	134·5	275·1
1882	19·6	58·0	6·1	3·3	4·7	5·9	8·1	11·7	17·0	30·3	61·3	130·7	267·9

*Infant mortality.*—The deaths of infants in the first year of life numbered 125,020, and were in the proportion of 141 deaths to 1000 births, the mean proportion in the immediately preceding ten years having been 146 (Table 27). The infantile death-rate, as is always the case, was highest in the manufacturing and mining counties, and lowest in the agricultural counties. Thus in Lancashire it was 166, in Durham 160, in the West Riding 158, in Nottinghamshire 157, and in the East Riding and in Leicestershire 156, while in Dorsetshire it was only 93, and in Wiltshire 99.

*Centenarians.*—Passing from infancy to the other extremity of life, it will be seen in Table 28, that 71 persons who died in the year, namely 17 males and 54 females, were stated each to have completed a century of life, and that one of these, a navy pensioner, was alleged to have been no less than 108 years of age at his death.

*Mortality at School Ages.*—Among the subjects that in the course of the year were referred to the General Register Office for statistical examination was one which is of so much general interest that it may be well to give an account of it. There is, or was, a very widespread suspicion that the present educational system is acting injuriously upon the health of the children subjected to it, and the question referred to this office by the Educational Department was whether there was any statistical proof of deterioration of health in the children of school age, that is of from 3 to 15 years of age. The answer supplied from this office was as follows:—

“ We have no means of giving the death-rates of children of the precise ages 3-13, as requested, for this age-period is not one that is used by us in abstracting deaths. We can, however, give the death-rate of children of from 5 to 15 years of age, and this age-period will probably be a better one than 3-13 to test the possible effect of school-work on children's mortality; for, though the children of three and four years of age are omitted, school can scarcely be supposed to affect them in the way of injury from overwork; and, though boys and girls of 14 and 15 are included, it must be remembered that any injurious effects of overwork at

school that may exist will be carried on after the actual school-attendance is finished. The effect, if there be any, of overwork would be in the latter years of school attendance, viz., the 12th and 13th years, and the injury would cause increased mortality not only in those years but at least for some few years afterwards. The age-period, then, which we take is the decade from 5 to 15 years of age, and the periods we take for comparison are the decennia 1861-70 and 1871-80.

"The death-rate of children (5-15) in 1861-70 was 6·3 per 1000. It fell in 1871-80 to 5·1 per 1000; a decline of 19·05 per cent. The main part in this fall was due to diminished mortality from the chief zymotic diseases namely, small-pox, measles, scarlatina, whooping-cough, diphtheria, fever, and diarrhoea. These diseases caused a mortality of 2·9 per 1000 in the first decennial period, but only of 2·1 per 1000 in the second.

"But after excluding these diseases from the account, as irrelative to the question at issue, there was still a considerable decline in mortality. In the first period 1861-70 the death-rate from all causes other than zymotic was 3·4 per 1000, in the second it was only 3·0.

"But inasmuch as school work, if it be injurious to health, would probably be so by affecting the brain and, generally, the nervous system, it would be well to split up these death-rates from causes other than zymotic, into death-rates from diseases of the nervous system, and death-rates from other causes. When this is done we find that the entire fall was due to diminished mortality from other causes. The rate from these fell from 2·9 to 2·5 per 1000, whereas the death-rate from nervous affections remained unaffected. Indeed if a second place of decimals were taken it would appear that nervous diseases had, slightly, very slightly, increased.

"It would appear, therefore, that, while the mortality of children from all causes and from zymotic causes has considerably diminished, their mortality from diseases of the nervous system has exceptionally remained stationary. The general improvement has not affected this class of diseases."

TABLE G.—ANNUAL DEATH RATE per 1000 LIVING of CHILDREN aged 5-15 in ENGLAND AND WALES in the two decades 1861-70 and 1871-80.

Years.	All Causes.	Principal Zymotic Diseases.	Diseases of Nervous System.	Other Causes.
1861-70	6·3	2·9	0·5	2·9
1871-80	5·1	2·1	0·5	2·5

To the above answer to the question addressed to this office may now be added the supplementary fact that the figures for 1881 and 1882 also showed a further and considerable decline in the deaths of children of the ages in question from all causes together, and from the chief zymotic diseases, while their death-rate from nervous diseases remained in each of the two years at exactly the same point as in the two preceding decades.

It may also be well to note that tubercular meningitis or acute hydrocephalus is not included in the foregoing table among diseases of the nervous system; and that the mortality ascribed to this cause was somewhat higher in 1881 and 1882 than in 1861-70. Both in 1881 and 1882 the death-rate among children of school age from this cause was 0·22 per 1,000, whereas in 1861-70 it averaged 0·20.

These statistics doubtlessly tend to support the view that the strain of education produces in a certain proportion of children injurious effects

upon the brain and nervous system; and, indeed, that such should be the case might be anticipated, for a certain amount of risk must almost necessarily be attached to the increased use of an organ, and such risk must be accepted as the inevitable drawback from counterbalancing advantages. At the same time it is necessary to be very guarded in drawing conclusions from these figures; for it must be admitted that the causes of death to which children succumb are far from being stated in medical certificates with such care and precision as would justify us in attaching much practical importance to slight fluctuations under one or another heading.

*Sex.*—Of the deaths registered in the year, 265,767 were of males, and 250,887 were of females. The male death-rate was 20·7, and the female death-rate was 18·5, the mean annual rates for the preceding decennium (1872–81) having been 22·4 and 19·8 respectively. The male death-rate has therefore declined by 7·6 per cent. and the female death-rate by 6·6 per cent. from the preceding decennial mean. Out of equal numbers living of each sex there died 1118 males to 1000 females. The average proportion for the ten preceding years was 1131 to 1000. The falling off in mortality was, therefore, shared by males in higher proportion than by females.

*Urban and Rural Mortality.*—The death-rate in the urban population, consisting of some fifteen and a half millions of persons, was 21·1, while that of the rural population, comprising some ten and a half millions, was 17·2 (see Table 47). Compared with the previous ten years (1872–81) the urban rate declined 7·0 per cent., and the rural rate 8·0 per cent. Out of equal numbers living there died 123 persons in the urban to 100 persons in the rural population.

In comparing the urban and the rural mortalities with each other, it is important to remember that the age and sex distribution differs widely in the two populations, and that the differences tell largely in favour of the urban population, which contains a much smaller proportion of aged persons and a much larger proportion of persons in the prime of life, as also a much larger proportion of females, than does the rural population; and that, though these favourable conditions are somewhat counterbalanced by there being in towns a larger proportion of young children, whose mortality is always high, yet this disadvantage is by no means an equivalent for the above-mentioned advantages.

For example if we take the death-rate in England and Wales at each age-period in the last completed decennium (1871–80) as a standard, the general annual death-rate in the aggregate urban sanitary districts, including London, should have been 20·40 per 1000, and the death-rate in the aggregate rural sanitary districts should have been 22·83 per 1000, while the death-rate in the whole of England and Wales was 21·27. In other words on the hypothesis that the urban and rural districts were equally healthy, the death-rate in the former should have been 4·09 per cent. below that of England and Wales, and the death-rate in the latter 7·33 per cent. above it.

#### REGISTERED CAUSES OF DEATHS.

In my last Annual Report (p. xxi) I made an appeal to medical practitioners, asking them to use greater care and precision in stating the causes of deaths in their certificates. That appeal I must again repeat. The number of certificates in which the cause of death is inadequately stated is so large, that it is impossible to send out letters of inquiry asking for further information in each individual case. There were for instance no less than 1,852 certificates in the year, in which the cause of death was simply stated to be “dropsy,” a symptom of cardiac, of renal, and of

pulmonary disease alike. So far, however, as the work of the department would permit, the practice introduced in 1881 was continued through 1882, and letters of inquiry were sent out in 1844 cases. The results of some of these inquiries were as follow, and show how necessary some such practice had become. In 413 cases the assigned cause of death was pyæmia or septicæmia without further specification; it was found by inquiry that of these 413 cases 123 were connected with parturition; 170 more were due to diseases and injuries, the nature of which was given in answer to the application; while in 120 no additional information was elicited. Again, 432 letters were sent out concerning cases of women of childbearing ages, in which the assigned cause was simply peritonitis. In 179 of these it was ascertained that the peritonitis was connected with parturition; in 51 more that it was connected with assignable injuries or diseases; while in 202 no further information was elicited. Without entering into further detail, it will be enough to state that one result of the 1,844 letters of inquiry was to add no less than 428 deaths to those assigned to puerperal fever or to other incidents of childbirth. Without this correction the mortality of women in childbirth would have been 4·61 to 1000 children born alive; with the correction the rate was 5·09; a difference, amounting to no less than 10 per cent.

The assigned causes of death were distributed in the several classes as follows:—

TABLE H.—MORTALITY FROM THE SEVERAL CLASSES OF DISEASES.

Causes of Death.	Total Deaths in 1882.	Rate per Million living.		
		1882.	1881.	1871-80.
Zymotic diseases - - -	81,560	3,088	2,660	3,727
Parasitic diseases - - -	969	37	39	57
Dietic diseases - - -	1,803	68	65	63
Constitutional diseases - -	89,684	3,395	3,328	3,597
Developmental diseases - -	41,143	1,558	1,583	1,676
Local diseases - - -	253,329	9,591	9,348	9,928
Violence - - -	17,689	669	697	737
Ill-defined and not specified causes -	30,477	1,154	1,160	1,611
All causes - - -	516,654	19,560	18,880	21,396

*Zymotic or Specific Febrile Diseases.*—The deaths ascribed to this class of causes were 81,560, being in the proportion of 3088 to a million persons living. This rate, though higher than in the immediately preceding year, 1881, was very much lower than that in the preceding decade, 1871-80. The main decline of mortality was under the heading of diarrhoeal disorders and of continued fevers, which killed respectively 664 and 303 persons per million living, against 943 and 488 in the preceding completed decade. These declines in mortality were, however, to some extent counterbalanced by increase under several headings, namely, measles, whooping-cough, diphtheria, and puerperal fever. The deaths from measles were 481, from whooping-cough were 577, from diphtheria were 151, and

from puerperal fever were 98 per million persons living, against 379, 513, 121, and 74 respectively in the last completed decennium.

The increase of deaths under the heading puerperal fever was to a great extent due to the sending out of letters of inquiry respecting deaths ascribed to peritonitis and the like, by which 368 deaths were added to puerperal fever, which would otherwise have been classed elsewhere. Without these 368 deaths the rate would have been only 83 in 1882, against 74 in 1871-80. As puerperal fever is confined to parturient women, it is better to base its calculated death-rate on the number of births (Table 44) rather than on the number of the population. The deaths, then, ascribed to it in 1882 were in the proportion of 288 to 100,000 live-births. If we omit, for the sake of comparison with previous years, the 368 deaths due to letters of inquiry, the rate would be 247 against 209 in the decennium 1871-80. There was thus, after all correction, a very considerable and real increase in the mortality from this disease in 1882, as also there had been in the previous year 1881, when the rate, if similarly reduced for comparison, would have been 228. This increase in 1881 and 1882 in the deaths ascribed to puerperal fever was coincident, as has been almost invariably the case whenever there has been a similar increase, with an increase in the deaths ascribed to erysipelas. This coincidence deserves careful consideration on the part of those who are engaged in midwifery practice.

The increase of mortality under the heading diphtheria may also, like that from puerperal fever, very possibly be in some degree only apparent; for, as was pointed out in the last Annual Report, the returns of mortality from this disease are very untrustworthy, there being apparently no general consensus among certifying medical men as to the precise use of this term. It is not uncommon in going through the death-registers to find all the fatal cases of throat-disease in some one medical man's practice in a small area returned as cases of diphtheria, while all those in the same area in a second man's practice are returned as ulcerated throat or simply as sore-throat. Again, what some return as diphtheria, others return as croup. Putting diphtheria and croup together, as being terms at any rate frequently used interchangeably, the mortality in 1882 was at the rate of 325 per million living, against 259 in 1881 and an annual mean of 291 in 1871-80.

The increased mortality under the two headings measles and whooping-cough was real and considerable. As these diseases are mainly fatal in the first five years of life, it will be well to limit our comparison to the mortality from them at that period of life. The death-rate, then, from measles among children under five was 2.57 per 1000 in 1871-80, but was 3.55 in 1882; the death-rate from whooping-cough at that age was 3.65 in 1871-80, but rose to 4.26 in 1882.

*Parasitic Diseases.*—The deaths ascribed to this class of diseases were fewer in proportion to the population than in any previous year (Table 30). The decline was under the heading thrush, and was probably due to more careful specification by medical men of the cause of death in the case of infants.

*Dietic Diseases.*—Among the diseases in this class, the only one that requires notice is alcoholism. The deaths ascribed to this cause were 50 per million living, and more numerous in proportion to the population than in any single year since 1864, when they were 51 per million persons living. In face of the very great diminution in the consumption of alcoholic drinks, as shown by the Customs and Excise returns, and of the fact that the purveyors of spirituous drinks, as shown in the recent Census Report, declined in the interval between 1871 and 1881 by no less than 17.7 per cent. for equal populations, it seems fair to conclude that the

apparent increase in fatal intemperance did not indicate a real increase, and was due to greater conscientiousness in stating the cause of death.

*Constitutional Diseases.*—The deaths classed under these diseases numbered 89,684, and were in the proportion of 3395 per million population, against a proportion of 3328 in 1881, and 3597 in 1871–80.

The decline of mortality in 1882, as compared with 1871–80, was entirely under the heading phthisis, and it is noticeable that the deaths ascribed to this cause were fewer in proportion to the population in each of the three successive years 1880, 1881, and 1882 than they had ever been before (Table 30). The decline, moreover, would appear to have been real and not only apparent; for, though doubtless the term phthisis is often used in certificates with considerable looseness, yet there was no corresponding increase of mortality under those headings which might be confounded with it. So far indeed was this from being the case, that there was, coincidently with the decline in phthisis, a decline in the deaths ascribed to other forms of tuberculosis and scrofula, in the deaths ascribed to diseases of the respiratory organs, and also in the deaths ascribed to ill-defined or not specified causes. The doubt, therefore, which was expressed in a former report (Forty-second Report, p. xxx.), as to the reality of the apparent improvement in regard to tubercular mortality, though it still cannot be entirely dismissed, yet rests on a less firm basis than was the case at that time; for there was then an increase to be noticed in the mortality assigned to respiratory diseases.

The deaths ascribed to cancer were more numerous in 1882 in proportion to population than they had ever been before; but the increase under this heading, as also under the heading diabetes, may almost certainly be ascribed to increased accuracy of diagnosis and certification.

*Developmental Diseases.*—The deaths ascribed to old age have for many years been diminishing in their proportion to the population, and in 1882 were fewer in proportion than in any former year. As old age is the natural termination of life, and the ailment of which all prefer eventually to die, this aggregate falling off in the mortality from this cause, if real, would not be an indisputable advantage. But doubtless much of the falling off under this heading is merely due to gradual improvement in the specification of the causes of which the old die. This, however, does not account for all the apparent decline in the mortality. For there has been in each of the three years 1880, 1881, and 1882 a sensible decline in the mortality of persons of advanced age from all causes; and in 1882 especially the death-rate of persons, 55 years of age and upwards, whether males or females, was lower than it had been for very many years, probably than it had ever been before (see Tables 24 and 25). The main factor that determines the death-rate of the aged is temperature, and especially the temperature of the winter months; and in 1882 the mean temperature of each of the six months of the first and fourth quarters was above the average.

Passing from old age to the other extreme of life, the deaths attributed to premature birth were 12,434, being in the proportion of 1399 such deaths to 100,000 live births. The proportion of such deaths to births has been apparently increasing. In the quinquennium 1871–75 the ratio was 1260 to 100,000 live-births; in the next quinquennium 1876–80 the rate rose to 1338; in 1881 it was 1363; and finally in 1882 it was, as before stated, 1399. Moreover, concomitantly with this increased mortality from premature birth, there was an increase in the deaths ascribed to congenital malformations. In the quinquennium 1871–75, these deaths were 185 per 100,000 live-births; in 1876–80 the rate rose to 239; in 1881 it was 249; and finally in 1882 as much as 254. As the infantile death-rate from all causes together has not been increasing, it is at any rate allowable to

suspect that the apparently increased mortality from premature birth and from congenital malformation has been only apparent, and due to transference of deaths from one alleged cause to another, the certification of causes of death in the case of infants being always extremely vague. Still it is not impossible that the apparent increase of premature births may be real, and connected with the marked increase in the employment of women in industrial occupations, as shown in the recent Census Returns.

*Local Diseases.*—In this group, which comprises nearly a half of all deaths, there was a considerable falling off of mortality as compared with the decade 1871-80, but a slight rise as compared with the year 1881. The decline of mortality was mainly under the headings convulsions, liver disease, and diseases of the respiratory organs. The mortality from diseases of the nervous and of the circulatory systems remained very nearly at the previous decennial average; while the mortality ascribed to diseases of the urinary system continued to increase, as it had done for many previous years, doubtlessly in consequence of more accurate diagnosis and specification of causes, by which the mortality from ill-defined and non-specified causes, has undergone progressive decrease.

*Violent Deaths.*—In this group there was a considerable decline of mortality, compared both with the immediately preceding year 1881, and with the preceding decade. The decline was in the deaths from accident and negligence, which were fewer in proportion to the population than in any year included in the table (Table 30), which goes back as far as 1859.

Of the deaths ascribed to accident and negligence about one quarter are of children under five years of age, and of these nearly one half are of infants in their first year of life. The form of accident to which by far the greatest part of these infantile deaths is due is suffocation in bed. As might be anticipated there is practically no difference in this first year of life between boys and girls in regard to their liability to fatal accidents. But no sooner is the first year completed, than a marked difference of such liability begins to manifest itself between the sexes. Already the boys begin to show a more venturous character and to display greater readiness to amuse themselves with fire, water, horses, and other dangerous attractions; and this difference increases with each successive year of childhood. Taking the returns for the last quinquennium, 1878-82, as a basis, it is found that the fatal accidents of males are 6 per cent. more numerous than the fatal accidents of females in the first year of life, a difference which corresponds pretty closely with the difference between the number of boys and girls living at that age. In the second year, the male accidents are 30 per cent. more numerous than the female; in the third year 51 per cent. more numerous; in the fourth year 61 per cent. more numerous; and in the fifth year of life the excess is no less than 74 per cent. After this age, the influence of occupation begins to come into operation, and the fatal male accidents are almost four times as numerous as the fatal female accidents.

It must not be supposed that this much greater liability of males to fatal accident is in any material degree the explanation of the higher death-rate of the male sex. The total mortality from violence is too small to affect the general death-rate to any great extent; and such small difference as is produced by this cause in the death-rates of the two sexes is to a very great extent counterbalanced by the mortality of females from childbirth and puerperal fever. The death-rate of males in the last completed decade (1871-80) was 22·61 per 1000, and that of females 20·00. Had there been no deaths either from violence or from childbirth and puerperal fever, the death-rates would have been 21·49 and 19·32.

*Ill-defined and non-specified Causes.*—It has already been stated that the number of deaths in which the cause is imperfectly stated has declined in a most satisfactory manner. I feel bound, however, to repeat the complaint made in my last report, that the class of cases in which more than in any other there is a right to expect careful and complete statement of cause of death, namely, those cases in which there is public inquiry at public expense into the circumstances attending the death, by no means fulfils that just expectation. For instance, in the year 1882, out of the inquests held in the registration district and city of Norwich, there were 55 in which the death was not due to violence but to some kind of disease. In only 13 of these 55 cases was the kind of disease stated in the verdict; in the remaining 42 cases the finding was simply worded “natural causes,” which for all purposes of classification of death by their causes is, I need hardly say, quite useless.

*Certification of the Causes of Death.*—The causes of 469,117 or 90·8 per cent., of the 516,654 deaths were certified by registered medical practitioners; while the causes of 27,367 or 5·3 per cent. were certified by coroners. The causes of the remaining 20,170, or 3·9 per cent., of the total deaths were not certified. The proportion of uncertified deaths varied very considerably in different parts of England and Wales. Thus excluding the metropolitan counties of Middlesex and Surrey, the percentage did not exceed 1·1 in Wiltshire, 1·4 in Rutlandshire, and 1·7 in Berkshire, while it ranged upwards to 6·2 in Herefordshire, 6·7 in Cumberland, and 6·9 both in Cornwall and in Durham. In the metropolis the proportion did not exceed 1·2 per cent., whereas in Wales it was 10·4 per cent.

The proportion of uncertified deaths showed a further slight decline from the proportions in 1880 and 1881, which were 4·3 and 4·1 per cent. respectively.

#### PROGRESS OF REGISTRATION.

During the year 1882 the number of names added to the printed alphabetical indexes of births, deaths, and marriages recorded in the national register of England and Wales was 1,814,478. At the close of the year the aggregate number of names in these indexes, which on 31st December 1882 embraced a period of  $45\frac{1}{2}$  years, was 66,619,275. The total number of searches in 1882 (including those in non-parochial and other records) was 33,597, showing an increase of 1292 or 4·0 per cent. upon the number in the previous year; the number of certificates issued was 27,551, or 3·7 per cent., more than in 1881. The amount received as fees for searches and certificates in the year 1882, and paid into Her Majesty's Exchequer, was 5,170*l.* 15*s.* 0*d.* (Table 48.)

For a list of the various public registers and records lodged in the General Register Office, Somerset House, see the Registrar-General's 34th Annual Report, pp. xxi.-xxii. and xxv.-xxvi.

#### MORTALITY OF THE ARMY.

From returns furnished by His Royal Highness the Field Marshal Commanding-in-Chief, it appears that the average strength of the Army at home and abroad was 189,229, and that the number of deaths was 2224; so that the rate of mortality was 11·8 per 1000, against 14·0 in 1881, 17·6 in 1880, and 22·2 in 1879.

The average strength of the Army at home was 94,295, and the deaths were 806; while the average strength of the Army abroad was 94,934, and the deaths were 1418. The death-rate at home was, therefore, 8·5 per 1000, and the death-rate abroad 14·9. (See Tables 54-61.)

## MORTALITY IN THE NAVY.\*

The total force in the service afloat, corrected for time, in 1882 was 43,475. The deaths were 413, of which 299 were due to disease and 114 to injury. The death-rate from disease alone was 6·87 per 1000, and from violence 2·62 per 1000, against 5·27 and 5·67 respectively in the preceding year, 1881. The great difference in the death-rate from violence in the two years was due to the large loss of life in 1881 from the explosion on board the "Doterel."

Of the 114 deaths from violence 42 were due to wounds received in action, 36 to drowning, 13 to falls from aloft, 2 to suicide, and 21 to other forms of violent death.

The assigned causes of the 299 deaths due to disease were as follow:—

Eruptive fevers	-	-	3	Diseases of—	
Continued fevers	-	-	81	Circulatory system	- - 24
Paroxysmal fevers	-	-	25	Absorbent system and duct-	
Other febrile diseases	-	-	8	less glands	- - 1
Rheumatism	-	-	5	Respiratory system	- - 45
Tubercular diseases	-	-	40	Digestive system	- - 38
Other constitutional dis-				Urinary and generative	
eases	-	-	2	system	- - - 6
Diseases of nervous system				Cellular tissue, and cuta-	
and of organs of special				neous system	- - 2
sense	-	-	17	Debility, &c.	- - 2

## BIRTHS AND DEATHS OF BRITISH SUBJECTS AT SEA.

*Marine Register Book.*—In accordance with the Births and Deaths Registration Act of 1874, commanding officers of British ships not in Her Majesty's service, and of foreign vessels trading to or from any port in the United Kingdom, are required, under a penalty, to transmit returns of all births and deaths occurring on board to the Registrar-General of Shipping and Seamen, who furnishes certified copies of such returns to the Registrars-General of England, Scotland, or Ireland. Returns of a similar character are also received from the commanding officers of Her Majesty's ships. The certified copies of births and deaths thus received by me constitute the "Marine Register Book." During the year 1882 the entries recorded in this Register were 353 births and 5040 deaths. Of these 5040 deaths, 2116 were returned as of English origin, and 388 were simply described as of "British" origin.

Among *passengers* on board merchant vessels at sea (see Table 62), 266 births and 678 deaths were reported during 1882; the deaths showed an increase 10·8 per cent. upon the number returned in the preceding year.

*Mercantile Marine.*—The Registrar-General of Shipping and Seamen reports (see Table 63), that the number of merchant seamen at sea in registered vessels during 1882 was 195,937. In 1874 the number was 203,606, but from this period to the year 1881 the number had steadily declined. The deaths from all causes among these merchant seamen during 1882 were 4659, equal to a rate of 23·8 per 1000 of the strength, exceeding by 2·4 the average annual rate (21·4) during the 31 years 1852–82.

\* The facts in this paragraph are derived from Dr. Lloyd's Report to the Director General of the Medical Department of the Navy.

## EUROPEAN STATES.

In Tables 73-87 will be found international vital statistics relating to thirteen of the principal European States, published in accordance with a resolution of the Statistical Congress, held at St. Petersburg in 1872. Table 73 affords the means for comparing the marriage, birth, and death rates in each State in a series of years, with the mean rate in each series; Tables 74-87 contain detailed returns for each State.

The general recovery in the *marriage-rate* observable in the different European States in 1881 continued in 1882, except in the Netherlands, Denmark, Belgium, and France. In Italy the rate, although lower than that recorded in 1881, was above the mean rate in the 18 years 1861-80. The rates in 1881 ranged from 12.7 in Sweden, 13.4 in Norway, and 13.6 in Switzerland, to 15.6 in Prussia, 15.7 in Italy, 16.4 in Austria, and 20.3 in Hungary. The rate in England and Wales was 15.5.

The *birth-rates* in the various States differed but little from those of the previous year, but varied in almost constant relation with the variations of the marriage-rate. The birth-rates ranged from 24.8 in France, 28.8 in Switzerland, and 29.4 in Sweden, to 37.1 in Italy, 37.2 in the German Empire, 37.3 in Prussia, 38.9 in Austria, and 44.6 in Hungary. The birth-rate in England and Wales was 33.7 per 1000. In France there were 1619 fewer marriages, and 1481 fewer births than in the previous year; and the marriage and birth-rates in 1882 were considerably below the mean rates during the 20 years 1861-80.

With the exception of Norway the *death-rates* in the various States in 1882 were below the respective average rates in preceding years. In Sweden, Norway, and Denmark, the death-rates in 1882 did not exceed 17.4, 18.4, and 19.5 respectively; the next lowest was 19.6 in England and Wales. The highest rates were 25.7 in the German Empire, 27.5 in Italy, 30.8 in Austria, and 36.6 in Hungary.

I have the honour to be,

Sir,

Your faithful servant,

BRYDGES P. HENNIKER,

*Registrar-General.*

---

## REMARKS ON THE METEOROLOGY OF THE YEAR 1882.

BY JAMES GLAISHER, ESQ., F.R.S., &amp;c.

The following remarks with regard to the excess or deficiency of atmospheric pressure, temperature, and rain-fall are primarily derived from observations made about London, but they may be taken as applying generally to the whole country.

*Atmospheric pressure.*—The readings of the barometer in the first 6 days of the year were below their average values, the mean daily deficiency being 0·23 in.; for the 49 days from January 7th to February 24th they were mostly above, the mean daily excess being 0·51 in.; from February 25th to March 6th they were below by 0·55 in.; from March 7th to the 19th the daily excess averaged 0·33 in.; from March 20th to April 2nd the readings were on the average in defect by 0·09 in.; from the 3rd to the 10th they were in excess by 0·25 in.; from April 11th to the 18th the mean readings were 0·32 in. below their averages, then slightly above for 3 days; from April 22nd to May 5th the readings were 0·34 in. below their averages; then for 14 days above by 0·33 in.; from May 20th to May 26th the readings were 0·21 in. below; they were above from May 27th to June 2nd by 0·26 in., then for 12 days they were 0·19 in. below, and for 3 days somewhat above; from June 18th to the 24th the readings were in defect by 0·12 in. daily, from June 25th to July 3rd they were about 0·11 in. in excess, from the 4th to the 18th there was a deficiency of 0·33 in. daily, then for 3 days there was a slight excess, followed by 4 days of a slight deficiency. From July 26th the readings were high for 17 days, being on the average 0·29 in. in excess, then they were low for 23 days, to September 3rd, being on the average 0·24 in. in defect; from September 4th to September 9th the readings were 0·18 in. above their averages; then for 31 days, to October 10th, there was an excess of pressure of 0·24 in. From October 11th to 13th the readings were 0·21 in. below the average, then for 5 days they were nearly of the average value; for the 24 days from October 19th to November 11th the mean daily deficiency was 0·27 in. November 12th and 13th were nearly of their average value, the 3 days November 14th to 16th were 0·33 in. below their average, then 2 days of nearly the average value were followed by 9 days of low readings, the deficiency being 0·35 in.; from November 28th to December 2nd there was a slight excess, followed by low readings on every day excepting the 19th and 20th to the end of the year, the average daily deficiency being 0·35 in.

The highest reading in the year at the height of 150 feet was 30·784 inches on January 18th, and the lowest 28·613 inches on October 24th; thus giving a range of 2·171 inches.

*Temperature.*—Till the 16th day of January the weather was warm; on the 17th a cold period set in and continued till the 26th, the average daily deficiency of these 10 days was 2°·6; on the 27th the weather became suddenly warm, and continued till the end of the month, the excess being 4°·4 daily; then for 10 days it was cold, the deficit being 3°·3; from February 11th to April 24th, a period of 73 days the temperature was warm, being 4°·3 above its average; from the 25th to May 1st, the average daily deficit of these 7 days was 3°·9, for 12 days the weather was rather warm, then for five days it was cold, averaging 2°·6 daily; from May 19th to the 31st, there was an excess of 2°·5; this was followed by 122 days of cold, the mean deficiency of which was 2°·2; from the 1st of October to the 15th the temperature was in excess, being 2°·3 daily; then from the 16th to the 30th, the deficit was 1°·3; from October 31st to November 10th the excess of mean temperature was 3°·9; these 11 days

were followed by another period of the same length, the deficiency being  $3^{\circ}\cdot8$  daily; for 5 days the temperature was warm, being  $5^{\circ}\cdot5$  above the average, then for 19 days it was cold, the deficiency being  $5^{\circ}\cdot6$  daily; and from December 16th to the end of the year the excess of mean temperature was  $6^{\circ}\cdot8$ ; the last few days were very warm, being  $12^{\circ}\cdot4$ ,  $15^{\circ}\cdot7$ ,  $15^{\circ}\cdot2$ ,  $13^{\circ}\cdot9$ ,  $12^{\circ}\cdot8$ , and  $12^{\circ}\cdot6$  respectively above their averages, and the mean of these six was  $13^{\circ}\cdot8$ .

The highest temperature of the air in the year was  $81^{\circ}$  on August 12th, and the lowest was  $24^{\circ}\cdot0$  on December 24th, thus giving a range of  $57^{\circ}\cdot0$ .

*Rainfall.*—The fall of rain about London in January was  $1\cdot35$  in.; in February was  $1\cdot14$  ins.; in March  $1\cdot14$  ins., being respectively  $0\cdot55$  in.,  $0\cdot44$  in., and  $0\cdot41$  in., below their averages. The fall in April was  $2\cdot40$  ins., being  $0\cdot65$  in. above its average; in May was  $1\cdot37$  in., being  $0\cdot71$  in. below its average; in June was  $2\cdot35$  ins., being  $0\cdot35$  in. above its average. In July the fall of rain was  $2\cdot45$  ins.; in August was  $1\cdot16$  in.; in September was  $2\cdot40$  ins., being respectively  $0\cdot11$  in.,  $1\cdot29$  in.,  $0\cdot01$  in. below their averages. The fall in October was  $5\cdot42$  ins., being  $2\cdot62$  ins. above its average. In November it was  $2\cdot19$  ins., and in December was  $1\cdot78$  in., being respectively,  $0\cdot15$  in. and  $0\cdot22$  in. below their averages. The total fall during the year was  $25\cdot2$  ins. The total falls of rain ranged from  $61\cdot73$  ins. at Bolton,  $60\cdot23$  ins. at Stonyhurst,  $54\cdot75$  ins. at Barnstaple, to  $26\cdot23$  ins. at Royston,  $26\cdot45$  ins. at Cambridge, and  $27\cdot14$  ins. at Camden Square.

*Thunderstorms* occurred on 59 days during the year, of these 13 were in June, 10 in November, 8 in May, 7 in both August and September, 5 in both April and July, 3 in October, and one in March.

*Thunder was heard but lightning was not seen* on 57 days during the year. The greatest number of days in one month was 15 in June, and the least was one in October. Thunder was not heard at any place in January, February, March, or December.

*Lightning was seen but thunder was not heard* on 34 days during the year, none of which were in January, February, or March.

*Solar halos* were seen on 55 days during the year. On 11 in November, 8 in September, 7 in May, 6 in July, 4 in March, April, and December, 3 in February, 2 in January, June, August, and October.

*Lunar halos* were seen on 45 nights in the year. On 8 in both November and December, 7 in March, 6 in October, 5 in January, 4 in September, 3 in April and May, one in August, and none in February, June or July.

*Aurora Boreales* were seen on 17 days during the year, on 8 in November, 4 in October, 3 in February, and 2 in December.

*Snow* fell on 42 days during the year, 15 in December, 14 in November, 4 in March, 3 in January, 2 in both February and October, and one in April and May.

*Hail* fell on 116 days during the year, 19 of which were in November, 16 in March, 13 in January and April, 11 in February, 10 in June, 9 in December, 8 in May, 6 in October, 5 in July, and 3 in both August and September.

*Fog* prevailed on 155 days during the year, and they were distributed as follows: January 17, February 12, March 12, April 9, May 9, June 8, July 5, August 10, September 21, October 17, November 15, and December 20.

---

PRELIMINARY TABLES.

(1882.)

---

TABLE 1.—ENGLAND.—Population, Marriages, Births, and Deaths registered in the Forty-five Years 1838-82.

YEARS.	Estimated POPULATION in the Middle of each Year.*	MARRIAGES.	PERSONS MARRIED.	BIRTHS (exclusive of Still-born).	DEATHS	EXCESS OF BIRTHS OVER DEATHS.
1838	15,287,699	118,067	236,134	463,787	342,760	121,027
1839	15,514,255	123,166	246,332	492,574	338,984	153,590
1840	15,730,813	122,665	245,330	502,303	359,697	142,616
1841	15,929,492	122,496	244,992	512,158	343,847	168,311
1842	16,130,326	118,825	237,650	517,739	349,519	168,220
1843	16,332,228	123,813	247,636	527,325	346,445	180,880
1844	16,535,174	132,249	264,498	540,763	356,933	183,830
1845	16,739,136	143,743	287,486	543,521	349,366	194,155
1846	16,944,092	145,664	291,328	572,625	390,315	182,310
1847	17,150,018	135,845	271,690	539,965	423,304	116,661

NOTE.—The Births and Deaths Registration Act of 1874, which rendered the registration of births compulsory, came into operation on 1st January 1875.

\* These estimates are calculated from the numbers enumerated at the last five Censuses taken. For the estimated numbers of males and females in each year, and population estimates for years prior to 1839, see Table 71.

TABLE 2.—ENGLAND.—Persons Married, Births, and Deaths to 1000 living  
in the Forty-five Years 1838-82.

Mean Annual Rate to 1000 in each quarter of the 45 years					13·6	16·6	15·8	19·4

\* The three months January, February, and March contain 90 days, and in leap year 91 days; the three months April, May, and June 91 days; and each of the last two quarters of the year 92 days. For these inequalities corrections have been made in the above calculations.

\* The prices of coal in 1853-81 are derived from a Parliamentary Return (225 of 1881) furnished by the Registrar of the London Coal Market, by order of the House of Commons; the quotation for 1882 is the mean of the four quarterly averages. The quarterly averages were from time to time supplied to the Registrar-General by Mr. Richard Meade, of the Mining Record Office.

TABLE 46.—ENGLAND.—Mortality per 1000 in Town and Country Districts  
in the Thirty-two Years 1851-82.

YEAR.	Persons to a Square Mile in England and Wales.	ANNUAL RATE OF MORTALITY per 1000 Persons living in			Deaths in Urban Districts to 100 in Rural Districts out of equal Numbers living.

Thirty-one years 1852-82	5,316,002	124,703	21·4

\* Deduced from a return of the number of accounts of wages and effects of seamen (exclusive of masters) dying before the termination of the voyage, received by the Registrar General of Shipping and Seamen. Since 1867 the return includes seamen dying ashore in foreign parts, whose wages and effects are delivered to the consuls, or officers of the hospitals, on their discharge from their ships.

If a seaman die on the passage from Sunderland to Calcutta, his death is reported at Calcutta, and his wages and effects are accounted for and transmitted home, if the vessel be not to return direct to the United Kingdom. But if a passenger die on board a ship which does not return to a British port immediately, but trades for a time in foreign parts, considerable delay may occur before his death is reported. In all cases, however, the date is given; in the accompanying tables the births and deaths are classed according to the years in which they were reported. In some passenger-ships women are employed as stewardesses, and are counted as part of the crew. They therefore form part of the strength in this Table, and if the death of a stewardess occur in the course of a voyage, it is included in the column of Deaths.

When a ship is lost with all persons on board, the owners return the number and names of the crew and the names of the passengers, when known, to the Registrar General of Shipping and Seamen.

**TABLE 72.—Changes in the Constitution of Registration Districts and Sub-districts during the Year 1882.**

N.B.—(1.) The Name of the District is in SMALL CAPITALS, that of the Sub-district in *Italics*.  
(2.) The Populations quoted are the Numbers enumerated at the Census of 1881.

No. of District.	NAME OF DISTRICT.	Date of Change.	Nature of Change.
14	LONDON CITY - -	1882. 1 January -	The sub-districts of <i>Castle Baynard</i> and <i>Allhallows Barking</i> were united under the name of <i>Allhallows Barking</i> (aggregate population 13,666).
162	BRIXWORTH - -	1 July -	The sub-districts of <i>Spratton</i> and <i>Brixworth</i> were united under the name of <i>Brixworth</i> (aggregate population 8,847).
215	PLOMESGATE - -	" -	The sub-districts of <i>Earl-Soham</i> and <i>Framlingham</i> were united under the name of <i>Framlingham</i> (aggregate population 5,820).
242	CRICKLADE - -	" -	See CIRENCESTER 331.
247	DEVIZES - -	1 January -	The sub-district of <i>Bromham</i> was abolished, and the sub-districts of <i>Devizes</i> and <i>Lavington</i> re-arranged as follows:— <i>Devizes</i> sub-district comprising St. John Devizes, St. Mary Devizes, St. James Devizes or South-broom, All Cannings, Allington, Alton-Barnes, Bishop's Cannings, Bromham, Chittoe, Etchilhampton, Full-away, Poulshot, Rowde, Stanton St. Bernard, and Stert (aggregate population 13,256); and <i>Lavington</i> sub-district, comprising Beeching-Stoke, Chirton, Earl Stoke, Easterton, Great Cheverell, Little Cheverell, Marden, Market Lavington, Marston, Patney, Potterne, Urchfont, West Lavington, and Worton (aggregate population 7,274).
250	WESTBURY - -	1 August -	The sub-district of <i>Edington</i> was abolished. The parishes of Kevill, Steeple-Ashton, and Great Hinton (aggregate population 1,414), were added to <i>Bradley</i> sub-district, and the remainder, consisting of the parishes of Edington, East Coulston, and Bratton in Westbury civil parish, (aggregate population 1,696) were added to <i>Westbury</i> sub-district.
331	CIRENCESTER - -	1 July -	The parish of Marston-Maisey (population 185) was transferred from the sub-district of <i>Fairford</i> to that of <i>Cricklade</i> (242: 2).
419	GRANTHAM - -	1 April -	The sub-districts of <i>Colsterworth</i> and <i>Denton</i> were united under the name of <i>Grantham South</i> , except that the parish of Somerby (population 1,189) was transferred to <i>Grantham</i> , now <i>Grantham North</i> , and the parish of Barrowby (population 807) was transferred from <i>Grantham North</i> to <i>Grantham South</i> .
431	NOTTINGHAM - -	1 July -	The sub-districts of <i>Castle</i> and <i>Park</i> were united under the name of <i>Park</i> (aggregate population 16,237); and the sub-districts of <i>Hyson Green</i> and <i>Radford</i> were united under the name of <i>Radford</i> (aggregate population 20,954).
497	BRADFORD - -	1 August -	The township of Manningham (population 37,304) was transferred from the sub-district of <i>Horton</i> to that of <i>Bradford West End</i> .
518	HOWDEN - -	" -	The sub-district of <i>Newport</i> was re-named <i>Wallingfen</i> .
589	BRIDGEND - -	1 November -	The parishes of Llanharan, Llanilid, and Peterstone (aggregate population 880) were transferred from the sub-district of <i>Maesteg</i> to that of <i>Cowbridge</i> , and the parishes of Higher Coychurch, Lower Coychurch, and Pencoe (aggregate population 1,335) were transferred from the <i>Maesteg</i> sub-district to that of <i>Bridgend</i> .
595	LLANDOVERY - -	1 October -	The new civil parish of Quarter Bach formed out of part of the parish of Llangadock (population 1,475) was transferred from the <i>Llangadock</i> sub-district to that of <i>Llandeibis</i> (596: 5).
596	LLANDILOFAWR - -	" -	See LLANDOVERY 595.
629	CONWAY - -	" -	The sub-districts of <i>Llechweidd-Isaf</i> and <i>Conway</i> were united under the name of <i>Conway</i> (aggregate population 6,801).

Under the provisions of "The Divided Parishes and Poor Law Amendment Act, 1876," small changes were made on the 25th March 1882 in the constitution of the following Districts:—ORSETT (190), CHELMSFORD (192), BLANDFORD (260), WEYMOUTH (264), DORCHESTER (265), CLDBURY MORTIMER (347), KIDDERMINSTER (376), DROITWICH (383), BROMSGROVE (384), BOSTON (417), HORNCastle (421), SPILSBY (422), RUNCORN (446), NORTHWICH (447), ROTHERHAM (510), DONCASTER (511), DURHAM (549), HOUGHTON-LE-SPRING (551), and CHESTER-LE-STREET (552).

NOTE.—An addition of territory containing a population of about 8000 was made in 1864, and the facts relating thereto are included in this Table from 1860. Previously to 1st January 1860, children who died within 24 hours after birth were counted as still-born.

\* Census years.

† Cholera was epidemic in the year 1853, and war raged in the years 1860 and 1864.

NOTE.—The population in the four years 1862-65 and in the years 1869-69 is estimated by means of the average annual rate of increase observed between the two enumerations of 1861 and 1866. The deaths of Frenchmen abroad, civil or military, are registered in the books of the Commune in which they were last domiciled.

\* Census years.

† Cholera prevailed in 1865-66, and war raged in 1870 and 1871.

1870	16,935,813	105,543	211,086	599,786	509,009	12·5	35·4	30·1

NOTE.—The Population enumerated at the Census of 1860 was 15,673,530. The estimated Population for Years subsequent to 1861 has been deduced from the Excess of Births over Deaths registered in each Year. The decline of registered marriages in 1870 is believed to be due to the introduction of civil registration, which occurred during that year.

\* Census year.

NOTE.—The facts for Rome were first included with those for the Kingdom of Italy in 1872.

\* Census years. The population figures given for census years show the numbers enumerated on 31st December in each of those years; whereas for each of the other years the population is estimated to the middle of the year. The population in inter-census years are somewhat over-estimated, no account having been taken of emigration.

\* The Registration or Union Counties consist of groups of Superintendent Registrars' Districts which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the prime town of the District, or the greater part of the population, is located. The boundaries of Registration Counties therefore differ more or from the boundaries of Counties (proper).

† These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Abstracts of Census of 1881. They do not include space occupied by foreshore or tidal water of rivers and creeks.

Act of 6 and 7 Wm. IV. c. 86, in the Year ending December 31st, 1882.

Where the parties to a marriage are of different religious persuasions it sometimes happens that the ceremony is performed according to the rites of both persuasions; in these cases the two ceremonies are entered as two marriages. Divorced men and women who marry are classified in these Abstracts as bachelors and spinsters.

\* The 630 Districts, which are arranged according to their local position, are collections of contiguous Parishes or Places, and are nearly always identical with the Poor Law Unions of the same names. They were re-numbered on the 1st January 1881.

† 1. The District of Kensington comprises the two Poor Law Unions of Paddington and Kensington.

																						174,169 Husbands.
Total Wives		29	299	1916	7728	14267	17862	70150	34131	11759	6396	4103	2651	1459	791	468	143	38	8	1	-	174,169 Wives.
																						AGES OF HUSBANDS.

The Table read *vertically* shows the number of *Wives* at each age, with the ages of their *Husbands* at marriage:—Thus, Of 17,302 *Wives* at the age of 20 and under 21 years *three* married *Husbands* aged 17; *one hundred and thirteen* married *Husbands* aged 18; *six hundred and thirty-six* married *Husbands* aged 19 years, &c.

Read *horizontally* the Table shows the number of *Husbands* at each age, with the ages of their *Wives* when married:—Thus, Of 9,822 *Husbands* aged 20 and under 21 years *four* married *Wives* aged 15; *forty-eight* married *Wives* aged 16 years, &c.

\* One of these was married at the age of 14.

AGES of 147,563 BACHELORS and 147,563 SPINSTERS who intermarried in 1882.

NOTE.—For area and population of the Registration Divisions and Counties, see pages 2 and 4.

\* The Registration Counties consist of groups of Superintendent Registrars' Districts, which are generally co-extensive with the Poor Law Unions. Those Districts which extend into two or more Counties (proper) are included entirely in that County in which the principal town of the District, or the greater part of the population, is located. The boundaries of the Registration Counties therefore differ more or less from the boundaries of the Counties (proper).

\* The Superintendent Registrars' Districts (630 in number) are collections of contiguous Parishes or Places combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are arranged, according to the local position, under the Registration Counties. The Sub-districts (2162 in number at the end of the year 1882) are sub-divisions of Districts, and comprise the Parishes or Places in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter W denotes that the Sub-district contains within its limits a Workhouse Establishment belonging to the District or Union; w indicates that a Workhouse Establishment receiving inmates from other Districts than the one in which it stands is included; H indicates a Hospital or Infirmary; L a Lunatic Asylum; and repetitions of any of these letters show the number of such Institutions in each Registration Sub-district.

† Wherever the minus sign (-) is prefixed to the numbers given in the Column headed "Excess of Births over Deaths," it denotes that the Births in the Sub-district, instead of exceeding the Deaths, were, in fact, less than the Deaths to the extent stated. The Excess of Deaths over Births is often attributable to the mortality in Institutions. The Deaths in the principal Institutions of England in 1882 are given on pages 93-114.

‡ 1. The Registration District of Kensington comprises the two Poor Law Unions of Paddington (St. Mary Paddington and St. John Paddington Sub-districts) and Kensington (Kensington Town and Brompton Sub-districts).

\* 629: 1.—For changes made on 1st October 1882 in the constitution of the Conway Sub-district, see Table 72.

† 630.—The District of Anglesey comprises the two Poor Law Unions of Anglesey (Llangefni, Llandyrydod, and Amlwch Sub-districts) and Holyhead (Bryngwran, Llanddausaint, and Holyhead Sub-districts).

The parishes of Bodewryd and Rhosbeiro, however, situated in Llanddausaint Sub-district belong to the Union of Anglesey and not to the Union of Holyhead.

## DEATHS IN PUBLIC INSTITUTIONS.

1882.

THE following pages contain the numbers of deaths registered during 1882 in most of the Public Institutions of England. These figures afford the means of correcting the mortality of districts and sub-districts in which Public Institutions are situated. The list includes Workhouses, Hospitals, Infirmaries, and Public Lunatic Asylums, while Prisons, Almshouses, Schools, Private Lunatic Asylums and Benevolent Asylums, are excluded. The list, as settled, includes 1546 Institutions: of which 725 are Workhouses, Workhouse Infirmaries, or Workhouse Schools; 732 Hospitals or Infirmaries; and 89 Lunatic Asylums. The Lunatic Asylums are mostly County Asylums, but a few private Asylums which receive pauper patients are also included. In these 1546 Institutions 52,472 deaths were registered during the year, or 10·2 per cent. of the total deaths in England and Wales, against 9·4 and 10·8 per cent. in the two preceding years; 33,041 occurred in Workhouses, 14,550 in Hospitals, and 4,881 in Lunatic Asylums. The proportion to total deaths was 6·4 per cent. in Workhouses, 2·8 in Hospitals, and 0·9 in Lunatic Asylums.

Information relating to the deaths recorded in many Private Lunatic Asylums, and Charitable Institutions, will be found in the notes to the following pages.

\* In the Coppice, a Lunatic Hospital, no death occurred during the year.

† On the 1st July 1883 the sub-districts of Castle and Park were united and named Park sub-district. The figures are given as if the alteration had been effected on 1st January.

‡ In Wye House, a private Lunatic Asylum, one death occurred during the year.

§ This Hospital was transferred from Ardwick sub-district to Charlton (461: 2) in June 1882. The figures are given as if the transfer had been effected on 1st January.

¶ In The Brook Villa, a private Lunatic Asylum, 5 deaths occurred during the year.

\*\* This Hospital was opened in April 1882.

Deaths registered in the Public Institutions of England in the Year 1882—continued.

\* When a person dies from an operation, performed on account of any disease or injury the nature of which is stated in the certificate, the death is classed under that disease or injury. The same is done with deaths attributed to Traumatic Tetanus. The figures above refer, therefore, only to those deaths from operation and those deaths from Traumatic Tetanus concerning which no further information was obtained.

Of the above 11,406 ACCIDENTS, 94 are stated to have occurred to Persons in a state of INTOXICATION and 10 to Persons suffering from DELIRIUM TREMENS. And in 335 other cases Death was accelerated by the supervention of ERYSIPELAS, MORTIFICATION, PYEMIA, or TETANUS. Here follow the details:—

CAUSES INDUCING OR ACCELERATING DEATHS FROM ACCIDENT.	ALL AGES.	AGES AT DEATH.																		
		Total under 1 Year.		1	2	3	4	Total under 5 Years.	5	10	15	20	25	35	45	55	65	75	85 and up-wards.	
		Infants under 1 Month.	Others.

## INDEX OF DISTRICTS.

The following Index furnishes a reference to the *Number* of each REGISTRATION DISTRICT in the topographical arrangement adopted in the Tables of Abstracts contained in the Report.\* The alphabetical arrangement places compound names in the order in which they are pronounced: thus, East Ashford will be found under the letter E, and *not* under A.

In consequence of numerous alterations (amalgamations of districts and formations of new districts) since the numerical arrangement, 1 to 623, was adopted in the Abstracts for the year 1847, the districts were re-numbered consecutively from 1 to 630 in the Abstracts for the year 1881.

*For names of Towns, such as Leamington, Torquay, &c., which are not found in this "Index of Districts," see the "Index of Sub-districts" (page 228) and "Index of certain Towns" (page 238).*

**A**

Aberayron, 604.  
Abergavenny, 582.  
Aberystwith, 605.  
Abingdon, 115.  
Alcester, 397.  
Alderbury (Salisbury), 254.  
Alnwick, 563.  
Alresford, 105.  
Alston, 568.  
Alton, 106.  
Altrincham, 445.  
Alverstone, 89.  
Amersham, 140.  
Amesbury, 253.  
Amphill, 173.  
Andover, 110.  
Anglesey, 630.  
Ashborne, 438.  
Ashby-de-la-Zouch, 406.  
Ashton-under-Lyne, 468.  
Aston, 387.  
Aitcham (Shrewsbury) 351.  
Atherstone, 389.  
Auckland, 545.  
Axfordge, 315.  
Aminster, 269.  
Aylesbury, 143.  
Aylsham, 225.  
Aysgarth, 539.

**B**

Bakewell, 440.  
Bala, 623.  
Banbury, 155.  
Bangor, 628.  
Barnet, 128.  
Barnsley, 506.  
Barnstaple, 285.  
Barrow-in-Furness, 482.  
Barrow-upon-Soar, 408.  
Barton Regis, 321.  
Barton-upon-Irwell, 463.  
Basford, 430.  
Basingstoke, 108.  
Bath, 317.  
Battle, 69.  
Beaminster, 267.

## INDEX OF SUB-DISTRICTS.

[This alphabetical arrangement places the Registration Sub-Districts (or Registrars' Districts) having *compound names* in the order indicated by the usual pronunciation of those names; thus, East Grinstead will be found under the letter E, and not under G; St. James under the letter S, and not as "James, St." The number against each Sub-District, in the third column, refers to its numerical place in the Tables of Abstracts; thus, Abbey Holme (573; 2) is the 2d Sub-District of the Wigton District, No. 573.]

SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.	SUB-DISTRICT.	DISTRICT.	No.
<b>A</b>			Ardleigh . . .	Tendring . . .	195; 4	Barton . . .	Glanford Brigg	425; 3

## ALPHABETICAL INDEX

TO

REGISTRAR-GENERAL'S FORTY-FIFTH ANNUAL  
REPORT.

	PAGES
<b>ACCIDENT;</b> Male mortality from, exceeds the Female after the first year of life . . . . .	xx
deaths from, at various Ages . . . . .	211-217
<b>AGES;</b> Mean Age at Marriage of Men, Women, Bachelors, Spinsters, Widowers, and Widows, 1867-82. (Table C.) . . . .	viii
Marriages of Bachelors and of Spinsters per 1000 living at successive life periods 1870-71-72 compared with 1880-81-82. (Table D.) . . . . .	ix
Minors married in 1882, and the per-centage to total marriages . . . . .	ix
at Death . . . . .	xiii
Death-rates at successive life-periods, 1876-82. (Table F.) . . . .	xiv
Deaths under one year . . . . .	xiv
Deaths over 100 years . . . . .	xiv
Deaths at School Ages. (Table G.) . . . . .	xiv-xv
at Death, of Males and Females in each year, 1838-82. (Tables 21, 22.) . . . . .	xlviii-xlix
Mortality of Males and Females at 12 groups of, 1838-82. (Tables 23-25.) . . . . .	1-lii
Mortality in Counties, at 12 groups of, in 1882. (Table 26.) . . . .	liii
of 348,338 Persons married, distinguishing Bachelors, Spinsters, Widowers, and Widows . . . . .	26-28
at Death, of Males and Females registered in Divisions, Counties, and Districts . . . . .	115-136
at Death, of Males and Females from different Causes . . . . .	137-145
at Death, of Males and Females, in London, from different Causes . . . . .	146-153
<b>ALCOHOLISM;</b> increase of, probably only apparent . . . . .	xviii
<b>AREA</b> in Acres and Hectares of the United Kingdom and its parts. (Table 49.) . . . . .	lxxxix
in Acres of the Islands in the British Seas—Man, Jersey, Guernsey, &c. (Table 51.) . . . . .	lxxxii
in Acres of each Division, County, and District . . . . .	2-24
in Acres of each District and Sub-district . . . . .	32-91
<b>ARMY;</b> Strength and Mortality of, in 1882 . . . . .	xxi
Average Strength of, at Home in 1882. (Table 54.) . . . .	lxxxiv
Average Strength and Distribution of, in different parts of the United Kingdom and Abroad in each Year, 1863-82. (Table 55.) . . . . .	lxxxiv
Average Strength, Deaths, and Death-rate in the United Kingdom. (Table 56.) . . . . .	lxxxiv
Average Strength Abroad in each Year 1879-82. (Table 57.) . . . .	lxxxv
Deaths in, in Great Britain, Ireland, and Abroad in each Year, 1879-82. (Table 58.) . . . . .	lxxxv

## ARMY—continued.

Death-rate at Home and Abroad in each Year, 1859-82. (Table 59.) . . . . .	lxxxv
Nationality of, in 1861-71-81. (Table 60.) . . . . .	lxxxvi
Deaths in, in each Year, 1858-82, and the estimated Proportions belonging to England, Scotland, Ireland, and foreign parts. (Table 61.) . . . . .	lxxxvi
AURORÆ BOREALES in 1882 . . . . .	xxv
AUSTRIA; Marriage, Birth, and Death-rates in each Year, 1861-82. (Table 73.) . . . . .	ci
Estimated Population; Number, and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-82. (Table 78.) . . . . .	civ
ATMOSPHERIC PRESSURE in 1882 . . . . .	xxiv.
BANKERS' CLEARING HOUSE; amount cleared per head of population, 1868-82. (Table A.) . . . . .	vi
BELGIUM; Marriage, Birth, and Death-rates in each Year, 1861-82. (Table 73.) . . . . .	ci
Estimated Population; Number and Proportion to Population, of Persons married, of Births, and of Deaths, in each Year, 1853-82. (Table 84.) . . . . .	cvi
BIRTHS in 1882 . . . . .	x
Sex proportions of . . . . .	xi
Illegitimate, Proportion to total Births and to Population . . . . .	xi
Illegitimate in Workhouses. (Table E.) . . . . .	xi-xii
of British Subjects at Sea . . . . .	xxii
registered, and excess over Deaths, in each Year, 1838-82. (Table 1.) . . . . .	xxviii
in each Quarter of the Years 1838-82. (Table 12.) . . . . .	xxxix
in each Year 1838-82; Legitimate and Illegitimate in 1842 and 1845-82, and Proportion of Males and Females. (Table 13.) . . . . .	xl
proportion of Illegitimate Children to every 100 Births in Counties in each Year 1872-82, and the mean of 10 Years, 1872-81. (Table 14.) . . . . .	xli
in Counties, in 1882. Numbers, Sex, Legitimate and Illegitimate; Proportions of Males to Females. (Table 15.) . . . . .	xlii
proportion of Males and Females born in Counties in each Year, 1872-82, and the mean of 1872-81. (Table 16.) . . . . .	xliii
in the United Kingdom and its parts. (Table 49.) . . . . .	lxxxvi
of British Subjects at Sea in each Year, 1856-82. (Table 62.) . . . . .	lxxxvii
in Divisions and Counties, distinguishing sex, Legitimate and Illegitimate . . . . .	30-31
in Divisions, Counties, Districts, and Sub-districts, distinguishing sex, Legitimate and Illegitimate . . . . .	30-91
excess over Deaths, in Divisions, Counties, Districts, and Sub-districts . . . . .	30-91
Illegitimate. (See ILLEGITIMATE BIRTHS.) . . . . .	
BIRTH-RATE in 1882 the lowest since 1853 . . . . .	x
disparity in several Counties, and apparent causes . . . . .	x
Illegitimate, slight decline of . . . . .	xi
average annual Illegitimate, per 1000 unmarried women, aged 15-45. 1880-81-82. (Table E.) . . . . .	xii
in each Year, 1838-82, and the mean of 45 Years. (Table 2.) . . . . .	xxix

	PAGES
<b>BIRTH-RATE</b> — <i>continued</i> .	
means of 45 years 1838-82, and of decennial and quinquennial periods 1838-80. (Table 3.) . . . . .	xxx
in each Quarter of the Year 1838-82. (Table 12.) . . . .	xxxix
in each Year, 1838-82, and Legitimate and Illegitimate rates in 1842 and in 1845-82. (Table 13.) . . . .	xl
in Counties in each Year 1872-82, and the mean of 1872-81. (Table 17.) . . . .	xliv
in the United Kingdom and its several parts. (Table 50.) . . .	lxxxi
<b>BRAIN DISEASES</b> , in Children of School Ages, 5-15 years. (Table G.) . .	xiv-xvi
(See CAUSES of DEATHS Tables.)	
<b>BRONCHITIS</b> . (See CAUSES of DEATHS Tables.)	
<b>BUILDINGS</b> registered for the Solemnization of Marriages . . . . .	x
<b>BURNS AND SCALDS</b> . (See CAUSES of DEATHS Tables.)	
<b>CANCER</b> , unprecedentedly fatal in 1882 . . . . .	xix
(See also CAUSES of DEATHS Tables.)	
<b>CAUSES of DEATH</b> ; Registered . . . . .	xvi
continued inadequate Certification of, and result of correspondence with Medical Practitioners in respect thereto . . . . .	xvii
Mortality from the various Classes, 1882. (Table H.) . . . .	xvii
Ill-defined and Non-specified . . . . .	xxi
Certification of, by Medical Practitioners and Coroners . . . .	xxi
further decline of uncertified Causes in 1882 . . . . .	xxi
in the Navy in 1882 . . . . .	xxii
of 71 reputed Centenarians in 1882. (Table 28.) . . . .	lv
in the twenty-four years 1859-82. (Table 29.) . . . .	lvi-lvii
Mortality from, to, 1,000,000 persons living in the twenty-four 1859-82. (Table 30.) . . . .	lviii-lix
Mean annual mortality from various causes to 1,000,000 living, in groups of ages, in quinquennials 1858-80, and in 1880-81-82. (Table 31.) . . . .	lx-lxi
Mortality from certain, in Counties, in 1882. (Table 34.) . . .	lxvi-lxvii
of Males and Females in 1882; Deaths from each Cause to 1,000,000 living of each Sex. (Table 35.) . . . .	lxviii
proportional Number dying from each Cause. (Table 36.) . . .	lxix
of 4,659 Sailors in 1882. (Table 64.) . . . .	lxxxix
in England, at different Periods of Life, Males and Females. . .	137-145
in London at different Periods of Life of Males and Females . .	146-153
in each of the Registration Counties, Males and Females . . .	154-177
and Inquest Cases in Divisions, Counties, and Districts . . .	178-210
Accidental, Suicidal, and Homicidal. . . . .	211-223
<b>CENTENARIANS</b> ; Deaths of reputed . . . . .	xiv
Occupations, Ages at, and Causes of Death in 1882. (Table 28.) .	lv
<b>CERTIFIED PLACES OF WORSHIP</b> ; Aggregate Number in 1882; the Number registered; and Certificates cancelled during the Year . . . .	x
<b>CERTIFICATION</b> of the Causes of Death . . . . .	xxi
<b>CHANGES</b> in the Constitution of Districts in 1882. (Table 72.) . . .	c

	PAGES
CHILDBIRTH; inadequate certification of Deaths from, in 1882; addition of 428 deaths to the certified number as the result of correspondence with Medical Practitioners . . . . .	xvii
Deaths at different Ages of Women after Childbearing, assigned to other Causes than Childbirth or Puerperal Fever. (Table 41.) . . . . .	lxxiii
Deaths of Women returned as pregnant, with the assigned Cause. (Table 42.) . . . . .	lxxiv
Deaths referred to, in each Year, 1847-82. (Table 43.) . . . .	lxxv
Deaths referred to, and Mortality of Mothers per 1,000 Children born alive, in Counties. (Table 44.) . . . . .	lxxvi
CHILDREN under One Year of Age, Mortality among, in Counties in each Year, 1872-82. (Table 27.) . . . . .	liv
Mortality of Infants under One Year of Age to 1000 births, in each Year 1838-82. (Table 32.) . . . . .	lxii-lxiii
Ditto in London. (Table 33.) . . . . .	lxiv-lxv
CIRCULATORY ORGANS. (See CAUSES of DEATHS Tables.)	
COALS; Average price of, in each Year 1852-82, and in each Quarter of 1875-82. (Table 45.) . . . . .	lxxvii
CONSOLS; average price of, 1852-82, and in each Quarter of 1875-82. (Table 45.) . . . . .	lxxvii
CONSTITUTIONAL DISEASES; Deaths from, in 1882, and Mortality in 1881-82, and 1871-80. (Table H.) . . . . .	xvii
remarks upon . . . . .	xix
CONVULSIONS; continual decline of deaths, from . . . . .	xx
CROUP. (See CAUSES of DEATHS Tables.)	
DEATHS in 1882 . . . . .	xiii
as affected by the Ages of the Population . . . . .	xiii
of Infants and of Centenarians . . . . .	xiv
at School Ages . . . . .	xiv
of each Sex . . . . .	xvi
In Town and Country . . . . .	xvi
Registered Causes of . . . . .	xvi
from various classes of Causes in 1882. (Table H.) . . . .	xvii
from Zymotic or Specific Febrile Diseases . . . . .	xvii
from Parasitic Diseases . . . . .	xviii
from Dietic Diseases . . . . .	xviii
from Constitutional Diseases . . . . .	xix
from Delevelopmental Diseases . . . . .	xix
from Local Diseases . . . . .	xx
from Violence . . . . .	xx
from Ill-defined and Non-specified Causes . . . . .	xxi
Certification of Causes of . . . . .	xxi
in the Army in 1882 . . . . .	xxi
in the Navy in 1882 . . . . .	xxii
of British Subjects at Sea . . . . .	xxii
in the Mercantile Marine in 1882 . . . . .	xxii
registered in each Year 1838-82. (Table 1.) . . . . .	xxviii
of Males to 100 Deaths of Females in each Year, 1838-82. (Table 18.) . . . . .	xl
of Males to 1000 Deaths of Females, in equal Populations of the Sexes, 1838-82. (Table 18.) . . . . .	xl

DEATHS—*continued.*

in each quarter of the Years 1838-82. (Table 19.) . . . . .	xlvi
of Males at different Ages in each Year 1838-82. (Table 21.) . . . .	xlvi
of Females at different Ages in each Year 1838-82. (Table 22.) . . . .	xlix
of 71 reputed Centenarians in 1882. (Table 23.) . . . .	lv
from various causes in each Year, 1859-82. (Table 29.) . . . .	lvi-lvii
from Zymotic Diseases in each Year, 1838-42 and 1847-82. (Table 32.) . . . . .	lxii
from Zymotic Diseases in each Year, 1838-82, in London. (Table 33.) . . . . .	lxiv
proportional number from each cause in 1882. (Table 36.) . . . .	lxix
from Scarlet Fever in Counties in each Year, 1872-82, and the annual average, 1872-81. (Table 37.) . . . .	lxx
from Fever at several Groups of Ages, in each Year, 1866-82. (Table 38.) . . . . .	lxxi
from Fever, and proportional number to 1,000 Deaths, in each Year, 1850-82. (Table 39.) . . . . .	lxxi
from Fever in Counties in each Year, 1872-82, and the annual average, 1872-81. (Table 40.) . . . . .	lxxii
of Women at different Ages after Child-bearing, assigned to various Causes other than Childbirth or Puerperal Fever. (Table 41.) . . . .	lxxiii
of Women returned as Pregnant, with the assigned Causes. (Table 42.) . . . . .	lxxiv
from Puerperal Fever and Child-birth in each Year, 1847-82, and Proportional Deaths of Mothers to Children born alive. (Table 43.) . . . . .	lxxv
in Counties, referred to Childbirth and Puerperal Fever. (Table 44.) . . . . .	lxxvi
in the United Kingdom and its Parts. (Table 49.) . . . .	lxxx
in Islands in the British sea, 1851-82. (Table 51.) . . . .	lxxxii
in the British Army. (Tables 56, 58, 61.) . . . . .	lxxxiv-lxxxvi
of British Subjects at Sea, in each Year, 1856-82. (Table 62.) . . . .	lxxxvii
of Merchant Seamen at Sea, in each Year, 1852-82. (Table 63.) . . . .	lxxxviii
of 4659 Merchant Sailors and the Causes. (Table 64.) . . . .	lxxxix
in Divisions, Counties, Districts, and Sub-districts, Males and Females . . . . .	30-91
excess of Births over, in Divisions, Counties, Districts, and Sub- districts . . . . .	30-91
in Public Institutions . . . . .	93-114
of Males and Females at different Ages in Divisions and Counties . . . .	115-125
at different Ages, in Districts . . . . .	126-136
causes of, at different Ages, Males and Females . . . . .	137-145
causes of, at different Ages, in London, Males and Females . . . . .	146-153
causes of, in each of the Registration Counties, Males and Females . . . .	154-177
causes of, and Inquest Cases in Divisions, Counties, and Districts . . . .	178-210
from Accident at different Ages, Males and Females . . . . .	211-217
from Suicide, at different Ages, Males and Females . . . . .	218-219
from Murder and Manslaughter, at different Ages, Males and Females . . . .	220-223
DEATH-RATE; in 1882, lowest but one on record . . . . .	xiii
affected by Age-distribution of Population . . . . .	xiii
Annual at successive Life-periods, 1876-82. (Table F.) . . . .	xiv
great decline of, among Infants . . . . .	xiv
at School Ages, 5 to 15 Years. (Table G.) . . . .	xiv-xvi
of each sex . . . . .	xvi

DEATH-RATE—*continued.*

in Urban and Rural Districts . . . . .	xvi
Decline per cent. in 1881 and 1882 as compared with mean annual, 1871-80. (Table H.) . . . . .	xvii
per 1,000,000 living from the various Classes of Diseases in 1881 and 1882, and mean annual, 1871-80. (Table H.) . . . .	xvii
in the British Army at Home and Abroad, in 1882 . . . . .	xxi
in the Navy in 1882 . . . . .	xxii
per 1,000 strength in the Mercantile Marine in 1882 . . . . .	xxii
in each Year, 1838-82, and the mean of 45 Years. (Table 2.) . . . .	xxix
mean of 45 Years, 1838-82, and of decennial and quinquennial periods, 1838-80. (Table 3.) . . . . .	xxx
Persons, Males and Females, in each Year, and the mean of 45 Years, 1838-82. (Table 18.) . . . . .	xl
in each Quarter of the Years 1838-82. (Table 19.) . . . . .	xli
in Counties in each Year 1872-82, and the mean of 1872-81. (Table 20.) . . . . .	xlvii
of Males at different Ages in each Year, and the mean of 45 Years, 1838-82. (Table 23.) . . . . .	l
of Females at different Ages in each Year, and the mean of 45 Years, 1838-82. (Table 24.) . . . . .	li
of Males and Females at different Ages in Decennials and Quinquennials, 1841-80. (Table 25.) . . . . .	lii
at 12 Groups of Ages in Counties in 1882. (Table 26.) . . . . .	liii
of Children under One Year of Age to 1,000 births in Counties in the Years 1872-82, and the mean of 1872-81. (Table 27.) . . . .	liv
from various Causes in each Year, 1859-82. (Table 30.) . . . .	lviii-lix
from various Causes, in Groups of Years, 1858-80, and in 1880, 1881, and 1882. (Table 31.) . . . . .	lx-lxi
from the Principal Zymotic Diseases, 1838-42 and 1847-82. (Table 32.) . . . . .	lxiii
from the Principal Zymotic Diseases in London, 1838-82. (Table 33.) . . . . .	lxv
from certain Causes in Counties in 1882. (Table 34.) . . . .	lxvi-lxvii
from each Cause to 1,000,000 living of each Sex, in 1882. (Table 35.) . . . . .	lxviii
from Fever, in each Year 1850-82. (Table 39.) . . . . .	lxxi
of Mothers from Puerperal Fever and Accidents of Childbirth per 1000 children born alive in each Year, 1847-82. (Table 43.) . . . .	lxxv
ditto in Registration Counties in 1882. (Table 44.) . . . . .	lxxvi
in England and in Town and Country Districts in each Year, 1851-82, and the mean of 1851-82. (Table 46.) . . . .	lxxviii
in Town and Country Districts in each Quarter of 1872-82. (Table 47.) . . . . .	lxxix
in the United Kingdom and its several parts. (Table 50.) . . . .	lxxx
in the British Army. (Tables 56-59.) . . . . .	lxxxiv-lxxxv
of Merchant Seamen at Sea in each Year, 1852-82. (Table 63.) . . . .	lxxxviii

DELIRIUM TREMENS. (*See* CAUSES of DEATHS Tables.)

DENMARK; Marriage, Birth, and Death Rates in each Year 1861-82. (Table 73.) . . . . .	ci
Estimated Population; Number and Proportion to Population of Persons married, of Births, and of Deaths in each Year, 1850-82. (Table 75.) . . . . .	cii
DENSITY; Persons to a square Mile in each Year, 1851-82. (Table 46.) . . . .	lxxviii
Acres and Hectares to a Person in the United Kingdom, and its Parts. (Table 50.) . . . . .	lxxx

DEVELOPMENTAL DISEASES; Deaths in 1882, and Mortality from in 1881	
and 1882. (Table H.)	xvii
remarks upon	xix
DIABETES. (See CAUSES of DEATHS Tables.)	
DIARRHŒA. (See CAUSES of DEATHS Tables.)	
DIETIC DISEASES; Deaths in 1882, and Mortality from in 1881 and 1882.	
(Table H.)	xvii
remarks upon	xviii
DIPHTHERIA; increase of Mortality from, probably only apparent	xviii
(See also CAUSES of DEATHS Tables.)	
DISTRICTS; changes in the constitution of, in 1882. (Table 72.)	c
Alphabetical Index of	224-227
DIVORCE; remarriages of Divorced Persons in 1882	viii
DROPSY. (See CAUSES of DEATHS Tables.)	
DROWNING. (See CAUSES of DEATHS Tables.)	
EMIGRATION and IMMIGRATION in 1882 and their effect upon Population	v
from the United Kingdom, with the Destinations of the Emigrants,	
in each Year 1873-82. (Table 52.)	lxxxiii
Number and Destination of Emigrants of English Origin in each	
Year 1873-82. (Table 53.)	lxxxiii
ENGLAND AND WALES; Area in Acres and Hectares; estimated Population,	
and Marriages, Births, and Deaths. (Table 49.)	lxxxix
Density, and Marriage, Birth and Death Rates. (Table 50.)	lxxxix
Number and Proportion of the British Army recruited from. (Table	
60.)	lxxxvi
Deaths in the British Army abroad of Officers and Men belonging	
to, in each Year, 1858-82. (Table 61.)	lxxxvi
Population, Persons, Males, and Females, estimated to the middle	
of each Year, 1801-84. (Table 71.)	xcvi-xcviii
Population, Number, and Proportion per 1,000, of Persons married,	
of Births, and of Deaths, in each Year. 1853-82. (Table 74.)	cii
EUROPEAN STATES; Marriage, Birth, and Death Rates in 1882.	xxiii
Annual Rates per 1,000 of Persons married, of Births, and of	
Deaths, for series of Years. (Tables 73-87.)	ci-eviii
EXECUTIONS; and Ages at	138-139
in London	146-147
EXPORTS; Value of, per head, compared with Imports and Marriage-rates,	
1860-82. (Table A.)	vii
FEVER; Decline of mortality from	
Deaths from, at several Groups of Ages in each Year, 1866-82.	
(Table 38.)	lxxi
Deaths and Mortality from, in each Year, 1850-82. (Table 39)	lxxi
Deaths from, in Counties, in each Year, 1872-82, and average	
number, 1872-81. (Table 40.)	lxxii
(See also CAUSES of DEATHS Tables.)	
FOG in 1882	xxv
